

Comlight Access

Comlight Access provides connectivity for the Comlight light control segment and access to services and applications within the Comlight cloud system for the selected subscription period. Connectivity is provided for the gateway unit, that handles communication between the individual Comlight light controllers and the Comlight backend system. **Comlight Access** is a prepaid service, and the subscription will start when the Comlight segment is commissioned. The service is provided per controller, counting each gateway and standard controller. E.g. on a 20-unit segment (1 gateway + 19 standard units), 20 Comlight Access services are needed.

Communication Mobile 4G/LTE communication between gateway and Comlight backend system through national network providers*.

Comlight Backend Systems and infrastructure providing 24/7 services, capacity, backup, monitoring and security. 99% uptime guaranteed.

Comlight Core Basic functionality for user and access administration, subscription management, client and segment administration.

Comlight Tools Web tools for commissioning installations, view/modify parameters and reporting tools.

Comlight API REST API for 3rd party CMS (Control Management System) integration. Contact Comlight for API documentation. Support from Comlight is provided on an hourly basis.

Support 1, 2 and 3rd line support for services above.
